

FORMBOARD

Flatwork Form

FormBoard is highly reusable and environmentally friendly.

SUBJECT: FormBoard

Form Type: Footing/Flatwork Form

Manufacturer: EcoForm

Use: Residential

Website: www.ecoform1.com

Material: Wood/Polyethylene

There is only a handful of form board makers who are cranking out ecologically sound forming lumber. Made of an engineered lumber core with a UV-stabilized polyethylene coating, tested to withstand temperature ranges of minus 40 degrees to 150 degrees Fahrenheit, FormBoard is 30 percent lighter than solid sawn lumber. The engineered wood core provides dimensional stability while the UV-stabilized polyethylene coating prevents cracking and resists moisture. Contractors who use FormBoard already know you can cut, nail and stake it like standard lumber. Best of all, it doesn't have knots or twist and warp.

FormBoard comes in a wide range of sizes, including 1x4, 1x6, 2x4, 2x6, 2x8, 2x10 and 2x12 inches, all 16 feet long. For short runs, you can use solid sawn lumber and keep FormBoard in its full 16-foot length for maximum usage.

So if you are searching for a wood forming system that can handle anything a concrete contractor can dish out, FormBoard is geared up for high production and multiple reuse. ■
