## Specialty Formwork

### OWENS CORNING

The Fold-Form® insulating concrete form system is made of interlocking high-density expanded polystyrene form blocks. The system provides excellent energy efficiency, noise control, and resistance to natural disasters. Each preassembled form section is 4 ft (1.2 m) wide by 1 ft (0.3 m) high, allowing users to build walls and foundations of nearly any size, and forms come in thicknesses of 4 to 16 in. (100 to 400 mm). The Universal Corner Kit can be used for quick assembly of corners, and the unique hardware package allows users to assemble curved walls, brick ledges, and offsets.

### ECOFORM

BenderBoard is able to form a tight, uniform radius without overnight soaking. EcoForm's patented process coats engineered lumber with a UV-stabilized polyethylene coating that's been tested to withstand temperatures from -40 to 150 °F (-40 to 65 °C). This coating resists moisture penetration to the lumber core and ensures high reusability. The hardboard core allows for easy staking, and the forms require no special equipment or maintenance. They're ideal for forming patios, sidewalks, and decorative concrete work.
